

The Toxics Rule Facilities

National Electric Energy Data System (NEEDS 4.10) (EPA, December 2010)

Source: National Electric Energy Data System (NEEDS 4.10) (EPA, December 2010)

Note: This map displays facilities that contain at least one coal steam (including IGCC and petroleum coke) or oil steam unit in the NEEDS 4.10 IPM frame greater than 25 MW. NEEDS reflects available capacity on-line by the end of 2011; this includes committed new builds and committed retirements. Only coal and oil-fired units are covered by this rule; some of the oil units displayed are capable of burning oil and/or gas, if unit burns only gas, they will not be covered. In areas with a dense concentration of facilities, some facilities may be obscured.
